

Software Development Capability Statement

ALEX DOES IT, LLC

Partner-first delivery for subcontract work, overflow engineering support, white-label implementation, and dependable execution on well-scoped software initiatives.

Indiana-based, remote-first, U.S. delivery

Alex Does IT is a two-person custom software development consultancy built for fast, dependable delivery of well-scoped engineering work. The practice is a strong fit for subcontracting, overflow delivery, white-label implementation, and junior-friendly staff augmentation, with senior oversight on every deliverable.

Best fit: IT providers, agencies, MSPs, and government-adjacent subcontractors that need reliable implementation support without adding heavy process or agency overhead.

Core Capabilities

- Custom software development for internal tools, lightweight web applications, APIs, and automation
- Systems integration across third-party APIs, file-based workflows, and pragmatic implementation glue
- Delivery support for bug triage, incremental feature builds, documentation, and QA automation
- Modernization assistance through refactors, small-scale migrations, and operational improvements

Engagement Models

- Subcontract delivery with fixed-scope work packages, acceptance criteria, and weekly reporting
- Overflow delivery for short-term surges with prioritized backlog burn-down
- White-label implementation under partner branding with structured handoffs and documentation
- Junior-friendly augmentation with defined ticket execution by Cailey under senior review

Differentiators

- Small-team responsiveness with direct access to delivery and low overhead
- Senior review and testing discipline on all shipped work
- Clear communication with concise status updates, transparent risks, and measurable milestones
- Partner-first workflow that adapts to your tools, cadence, and documentation norms

Team

- Alex: principal engineer and accountable delivery lead covering architecture, reviews, partner communication, and delivery accountability
- Cailey: junior developer focused on structured tickets, documentation, and repeatable build tasks under supervision

Selected Relevant Experience

VADTrac

Led a HIPAA-compliant cardiovascular workflow platform used by NYU and Johns Hopkins, helping reduce staff turnover by 90% after digitizing critical workflows.

GotSafety

Led engineering for a national safety and training platform that scaled past 1M users while maintaining 99.999% uptime.

NOMOS / Apparel Redefined

Architected integration-heavy operations tooling and BSN Sports workflows that improved efficiency by 900%.

Navistar WIA

Delivered warranty analytics modernization that generated \$10M+ in annual ROI through reporting and automation improvements.

DocRaptor

Led technical support for a developer-facing HTML-to-PDF API, supporting enterprise teams and improving response quality under a fractional model.

Delivery And Governance

- Tooling and workflow alignment with partner issue trackers, repos, CI/CD, and documentation systems
- Weekly written status updates with scoped milestones and explicit risk flags
- Documented deliverables and knowledge transfer at project close
